

V-Mic D4 Mini

Product Description

The V-Mic D4 Mini is a high-quality, affordable miniature microphone that allows users to capture directional audio and reject sounds coming from off-camera. The D4 Mini utilizes a new offset shockmount that makes it the ideal microphone for use with wide angle vlogging cameras or action cameras. The side-mounted output jack is also perfect for hybrid DSLR shooters who still want to use their eyepiece for taking photos. The V-Mic D4 Mini features an input jack that allows you to split your audio tracks and easily insert a secondary audio source, like a wireless microphone, without a splitter cable.

What Makes V-Mic D4 Mini Different?

- 1) **Extra Audio Tracks:** The microphone features a unique input jack that allows you to insert a secondary audio source on the left channel of your camera. This lets the operator capture the scene's natural audio but also a wireless microphone of someone talking to camera. Great for videographers, wedding shooters or online content creators.
- 2) **Wind Reduction:** The faux fur windshield provides wind protection up to 20mph making this microphone ready for rough elements.
- 3) **Medium Diaphragm:** While other microphones in the micro-shotgun division feature capsules as small as 6mm, our V-Mic D4 Mini features our 4th generation 14mm medium diaphragm capsule - the same capsule found in the rest of our D4 series of video microphones.

Specifications
