

Deity IFB (Global)

Features:

- Ultra-Wideband Frequency; 550MHz ~ 960MHz
- Dual SMA Ports
- Metal Headphone Knob
- Locking 3.5mm Headphone Jack
- Bluetooth App Support; Remote Bulk Setup
- Bluetooth Headphone Support
- Ultra-Long Battery Life

Details:

The Deity DIFB features a modern interface with a large color screen that makes navigating the menu and settings easy. The home screen features the current frequency and volume, controlling which one you are interacting with can easily be switched between by pushing down on the rotatory encoder.

The Deity DIFB has a tunable ultra-wideband range of 550 MHz to 960 MHz. And by using your phone's GPS, the IFB will conform to local RF rules in different countries. The app allows you to perform frequency scanning, bank library programming, bulk updating, and frequency coordination.

Sometimes production people need to tune into more than just a single signal. The DIFB is able to store up to 20 different frequencies that you can rotate through via the rotatory knob.

The DIFB pushes the boundaries with 210% the battery life vs some of the legacy devices.

Lithium - 17Hrs

Akaline - 10Hrs

1900mAh NiMH - 9Hrs
